Sealed Air Corporation

Sealed Air Corporation.

For almost half a century, Sealed Air has been dedicated to delivering packaging materials and systems that perform each and every day for customers around the world. As a leading manufacturer and marketer of protective, specialty, and food packaging, we operate in over 46 countries reaching 80% of the world's population.

- More than 40 packaging design and applications laboratories worldwide.
- 2,300 active patents.
- Over 115 manufacturing plants.
- Over 17,000 employees.

From the same company that developed Bubble Wrap®, Jiffy Mailers®, Instapak® Foam and Cryovac® food packaging materials, Sealed Air answers customers' needs with the industry's broadest portfolio of shrink film options and equipment systems.

Why shrink packaging?

The perfect fit.

No matter what packaging format you currently use, shrink films provide unsurpassed benefits in improving overall production efficiency. From the smallest, most delicate product, to heavy, odd-shaped materials, shrink packaging offers the greatest opportunity for enhancing your entire packaging operation and delivers merchandising appeal at the point of purchase.

Merchandise products in the same package in which they are shipped.

Shrink films are transparent, enabling products to be clearly visible.

Sales will increase because shoppers can easily identify the product and actually see what they're purchasing.

Shrink film requires less warehouse space.

Space efficiency is increased.

Enables valuable manufacturing space to be utilized more effectively.

Improve product throughput.

A single roll of shrink film can wrap a variety of product sizes resulting in fewer changeovers on the packaging line. Increases productivity so you can move more products in less time.

Less inventory investment.

Packaging versatility - wraps wide ranges of product shapes, sizes, and weights.

Minimizes the number of packaging SKU's needed, making inventory management easier.

Product integrity is protected.

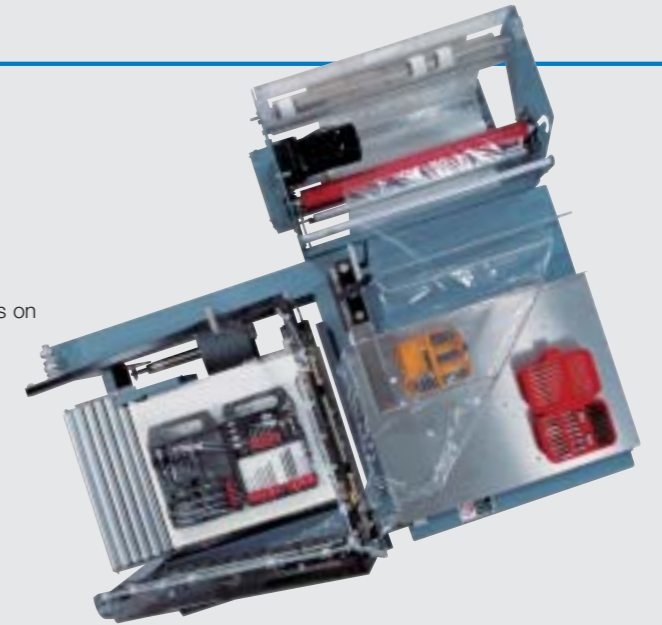

Shrink film packaging is tamper evident.

Shoppers will have more confidence in your product when making a purchase decision.

Increase labor efficiencies.

Shrink packaging lends itself to automation.

Lower operating costs and more streamlined management of resources.

How shrink films work.

Product is wrapped with film and sealed.

Package enters heat tunnel where film expands, then ...

... shrinks tightly, ready for distribution.

Why Sealed Air?

Delivering performance, time after time.

Sealed Air provides packaging solutions for customers around the world through a combination of equipment systems, applications, technical services and marketing support. Our shrink packaging materials and systems provide solutions for many applications where product protection and merchandising appeal are critical.

Your one-stop, single source supplier.

We are the industry's only integrated packaging materials and equipment systems manufacturer.

Your system will work everyday, meeting every packaging demand.

Materials and systems tailored to meet the demands of your applications.

Broadest product offering in the industry - Cryovac®, CorTuff®, Opti®, Shanklin®

Gives you the flexibility to only invest in the systems that meet your needs.

Expert local support and inventory of materials - delivered when and where you need them.

Sealed Air has the most effective and comprehensive distribution network of packaging materials and resources. Less down time when you need repairs or materials delivered quickly.

You get the competitive advantage over other shrink films and packaging formats.

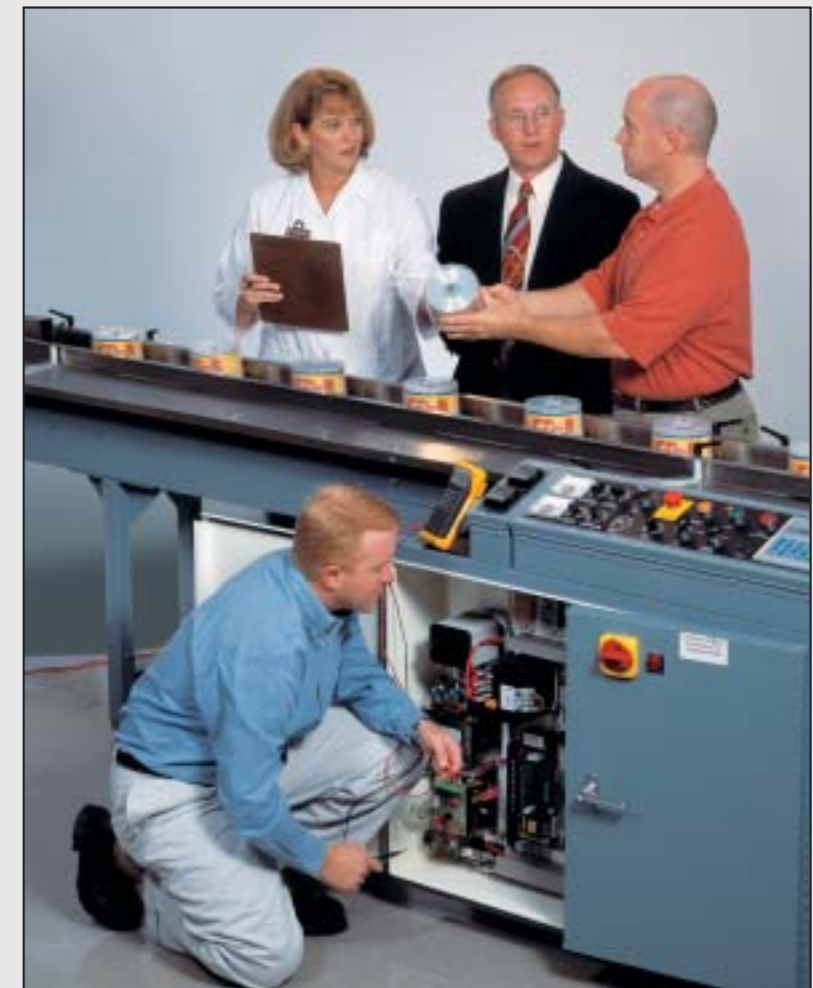

Experienced engineers and applications specialists supported by state-of-the-art facilities, and a commitment to research and development.

Access to latest technology in materials and equipment design.

Company-trained experts are only a phone call away.

The largest and most experienced team of packaging professionals in the industry.

Assistance with getting answers and help is provided quickly and effectively.

Sealed Air Shrink Packaging brands.

Cryovac® Performance Shrink Films

As the company's flagship shrink film brand, Cryovac is the benchmark to which other films are compared. With the industry's most comprehensive line of specialty films, Cryovac® films offer superior shrink, unsurpassed strength and merchandising appeal for protection of everything from industrial goods to consumer products.

Cryovac pioneered co-extrusion and electronic cross linking. These technologies and others make possible the variety of film options needed for practically any application. Our full line includes general-purpose, abuse resistant, soft shrink, high-speed, oxygen barrier, and anti-fog films. Cryovac films are Sealed Air's premium packaging materials, and are recognized as the most respected name in shrink films.

Shanklin® Equipment Systems

Shanklin® Equipment Systems have a long history of proven superiority and reliability. Since 1961, Shanklin Shrink Packaging machines have been the standard from which all others are compared. They represent the most comprehensive line of equipment for both large and small operations and continue to be the premiere supplier to the shrink packaging industry. Shanklin Equipment Systems are crafted with dedication and come from a long heritage inspired by innovation and quality engineering.

Offering the broadest range of equipment systems of any supplier, Shanklin lines include:

- A system for any throughput requirement
- Large or small products, Shanklin has a system to fit your needs
- A national distributor network that provides assistance when and where you need it

Shanklin Equipment Systems are compatible with all films in the industry. Because all of our equipment is American-made, parts are available quickly, when and where you need them.

CorTuff® High-Abuse Shrink Film

If you're looking for something tough that can handle the rigors of shipping and distribution while maintaining product integrity, CorTuff is the answer.

CorTuff High-Abuse Shrink Film is the toughest film available with the versatility to go head-to-head with bulky, traditional packaging media like corrugate, heavy-gauge polyethylene, skin packaging, and clamshells. With unprecedented impact strength, it can be used as the primary shipping medium and still look great to retail shoppers.

Versatile enough to wrap a wide range of product shapes, weights, and sizes, CorTuff High-Abuse Shrink Film has all the benefits of shrink film with the strength of rigid packaging.

Opti® Shrink Packaging Products

Opti® Shrink Packaging Products represent the perfect blend of performance and value for all of your general shrink-wrapping needs. Opti is the first complete line of both shrink films and equipment from a single supplier.

Offering complete, turnkey, cost-effective solutions, Opti is the answer for low to medium volume users looking for performance with a low cost of entry.

Whatever your packaging needs, Sealed Air can deliver. As the industry's only integrated shrink packaging materials and equipment systems manufacturer, we use the latest technology to offer the broadest range of packaging options including materials and systems for your specific needs. With the largest and most experienced team of packaging professionals around the world, expert packaging solutions are just a phone call away.

Sealed Air Corporation has grown to a worldwide network operating in 46 countries across the globe. Find out what the industry's most experienced team can do for you.
